Quicksign

Quicksign is a simple yet impactful web browser app for creating, customizing, and managing digital signatures. Built using HTML, CSS, and JavaScript, Quicksign provides an intuitive interface for users to draw signatures, customize them, and save or retrieve them from local storage.

Features

- **Canvas Drawing:** Draw your signature directly on the canvas using mouse or touch input.
- **Text Color Selection:** Choose your preferred text color for your signature.
- **Background Change:** Customize the background color of the canvas.
- **Font Size Adjustment:** Select the desired font size for your signature.
- **Clear Canvas:** Easily clear the canvas to redraw your signature.
- **Save and Download:** Save your signature as an image file to your local storage device.
- **Retrieve Signatures:** Load previously saved signatures from local storage.

Technologies Used

- **Frontend:** HTML, CSS, JavaScript (Canvas API)
- **Storage:** Local storage for saving and retrieving signatures

Usage

- Open the app in your browser.
- Draw your signature on the canvas.
- Use the color picker to choose your text color.
- Use the background color picker to change the canvas background.
- Adjust the font size using the font size selector.
- Click the "Clear" button to clear the canvas.
- Click the "Save & Download" button to save your signature as an image to local storage.
- Use the "Retrieve" feature to load a previously saved signature from local storage.

Prerequisites

You will need a web browser to run this app.

1. Clone the repository

2. Navigate to the project directory

3. Open the 'index.html' file in your web browser to run the app.
